ROLE SUMMARY

As the Software Developer will be responsible for developing, coding, installing, and maintaining software systems. Developers form a key part of the IT team and may be required to modify existing software products or develop entirely new resources.

We are looking for a talented developer to join our experienced development team. In this role, you will be responsible for designing, coding, testing, modifying, and implementing new or existing software products. Your duties will include liaising with the development managers, writing clean, scalable code, creating testing protocols, fixing bugs, and deploying programs.

To ensure success as a developer, you should have advanced knowledge of programming languages, excellent problem-solving skills, and the ability to work to a deadline. A top-class developer works together with the development team to create high-level programs that perfectly meet the needs of the company.

Expected Duties:

- Meeting with development managers to discuss the scope of software projects.
- Analyzing existing programs for modification purposes.
- Researching and designing new software systems, websites, programs, and applications.
- Writing and implementing, clean, scalable code.
- Troubleshooting and debugging code.
- Verifying and deploying software systems.
- Evaluating user feedback.
- Recommending and executing program improvements.
- Maintaining software code and security systems.
- Creating technical documents and training staff.

SKILLS/ REQUIREMENT	The developer must be able to:

- Establish a good working relationship with the Senior Responsible Owner
- Direct, manage and motivate the project team
- Develop and maintain an agreed project plan and detailed stage plans
- Understand and apply business case and risk management processes
- Tailor expert knowledge to meet specific circumstances
- Plan and manage the deployment of physical and financial resources to meet project milestones
- Build and sustain effective communications with other roles involved in the project
- Apply quality management principles and processes

Developer Requirements:

- Bachelor's degree in computer science, computer engineering, or information technology.
- Advanced knowledge of programming languages including JavaScript, HTML5, Java, C++, and PHP.
- Knowledge of software systems and frameworks including AnglularJS, Git, GitHub, and .NET.
- Experience with object-Relational Mapping (ORM) frameworks.
- Familiarity with Agile development technologies.
- Ability to learn new languages and technologies quickly.
- Good communication skills.
- Ability to work as part of a team or individually on a project.
- Ability to work well under pressure.

EDUCATION/ QUALIFICATION	**BA Hons, Prince 2 Practitioner**
BENEFITS	Role Type: Permanent- Hybrid (2 Days on site per Month) Salary: £40,500 per annum 25 days paid holidays
